

LM10QML Operational Amplifier and Voltage Reference

Check for Samples: [LM10QML](#)

FEATURES

- **Input Offset Voltage:** 2.0 mV (max)
- **Input Offset Current:** 0.7 nA (max)
- **Input Bias Current:** 20 nA (max)
- **Reference Regulation:** 0.1% (max)
- **Offset Voltage Drift:** 2 μ V/°C
- **Reference Drift:** 0.002%/°C

DESCRIPTION

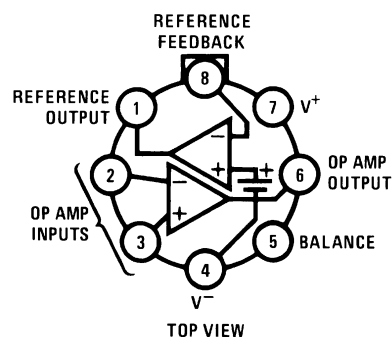

The LM10 is a monolithic linear IC consisting of a precision reference, an adjustable reference buffer and an independent, high quality op amp.

The unit can operate from a total supply voltage as low as 1.1V or as high as 40V, drawing only 270 μ A. A complementary output stage swings within 15 mV of the supply terminals or will deliver \pm 20 mA output current with \pm 0.4V saturation. Reference output can be as low as 200 mV.

The circuit is recommended for portable equipment and is completely specified for operation from a single power cell. In contrast, high output-drive capability, both voltage and current, along with thermal overload protection, suggest it in demanding general-purpose applications.

The device is capable of operating in a floating mode, independent of fixed supplies. It can function as a remote comparator, signal conditioner, SCR controller or transmitter for analog signals, delivering the processed signal on the same line used to supply power. It is also suited for operation in a wide range of voltage- and current-regulator applications, from low voltages to several hundred volts, providing greater precision than existing ICs.

Connection and Functional Diagram

**Figure 1. TO Package (NEV)
Package Number NEV0008A**

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Figure 2. Operational Amplifier Schematic — (Pin numbers are for 8-pin packages)

Figure 3. Reference and Internal Regulator Schematic — (Pin numbers are for 8-pin packages)

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings⁽¹⁾

Total Supply Voltage		45V
Differential Input Voltage ⁽²⁾		±40V
Power Dissipation (P_{Dmax}) ⁽³⁾		Internally Limited
Output Short-circuit Duration ⁽⁴⁾		Continuous
Storage Temperature Range		$-55^{\circ}\text{C} \leq T_A \leq +150^{\circ}\text{C}$
Maximum Junction Temperature (T_{Jmax})		150°C
Lead Temperature (Soldering 10 seconds)		300°C
Thermal Resistance	θ_{JA}	Still Air
		500LF/Min Air flow
	θ_{JC}	
ESD		Rating to be determined

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the Electrical Characteristics. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) The Input voltage can exceed the supply voltages provided that the voltage from the input to any other terminal does not exceed the maximum differential input voltage and excess dissipation is accounted for when $V_I < V_S$.
- (3) The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{Jmax} (maximum junction temperature), θ_{JA} (package junction to ambient thermal resistance), and T_A (ambient temperature). The maximum allowable power dissipation at any temperature is $P_{Dmax} = (T_{Jmax} - T_A)/\theta_{JA}$ or the number given in the Absolute Maximum Ratings, whichever is lower.
- (4) Internal thermal limiting prevents excessive heating that could result in sudden failure, but the IC can be subjected to accelerated stress with a shorted output and worst-case conditions.

LM10H Electrical Characteristics DC Parameters

The following conditions apply to all the following parameters, unless otherwise specified.

DC: At room temperature $1.2V \leq V_S \leq 45V$, $V_S \leq V_{CM} \leq V \pm 0.85V$.

DC: At temperature extremes $1.3V \leq V_S \leq 45V$, $V_S \leq V_{CM} \leq V \pm 1.0V$.

Symbol	Parameter	Conditions	Notes	Min	Max	Unit	Sub-groups
V_{IO}	Input Offset Voltage	$I_O = 0mA$		-2.0	2.0	mV	1
				-3.0	3.0	mV	2, 3
		$V_S = 1.2V$, $I_O = \pm 2mA$		-3.0	3.0	mV	1
		$V_S = 1.3V$, $I_O = \pm 2mA$		-4.0	4.0	mV	2, 3
		$V_S = 4V$, $I_O = \pm 20mA$		-3.0	3.0	mV	1
		$V_S = 4V$, $I_O = \pm 15mA$		-4.0	4.0	mV	2, 3
I_{IO}	Input Offset Current			-0.7	0.7	nA	1
				-1.5	1.5	nA	2, 3
I_{IB}	Input Bias Current				20	nA	1
					30	nA	2, 3
CMRR	Common Mode Rejection	$V_S = 45V$, $-20V \leq V_{CM} \leq 24.2V$		93		dB	1
				87		dB	2, 3
PSRR	Supply Voltage Rejection	$V_S^+ = 0.85V$, $-0.35V \geq V_S^- \geq -44.2V$		90		dB	1
		$V_S^+ = 1V$, $-0.3V \geq V_S^- \geq -44.2V$		84		dB	2, 3
		$0.85V \leq V_S^+ \leq 44.6V$, $V_S^- = -0.35V$		96		dB	1
		$1V \leq V_S^+ \leq 44.6V$, $V_S^- = -0.3V$		90		dB	2, 3
V_{RLine}	Line Regulation	$I_{Ref} = 1mA$		91		dB	1
				85		dB	2, 3
V_{RLoad}	Load Regulation	$V_S = 1.2V$, $0 \leq I_O \leq 1mA$		60		dB	1
		$V_S = 1.3V$, $0 \leq I_O \leq 1mA$		57		dB	2, 3

				80		K	5, 6
		$V_S = \pm 2V$, $I_O = \pm 20mA$, $V_O = \pm 1.4V$		5.0		K	4
		$V_S = \pm 2V$, $I_O = \pm 15mA$, $V_O = \pm 1.4V$		1.5		K	5, 6
		$V_S^+ = 0.85V$, $V_{CM} = -0.25V$ $V_S^- = -0.35V$, $I_O = \pm 2mA$, $-0.15V \leq V_O \leq 0.65V$,		1.5		K	4
$V_S^+ = 1V$, $V_{CM} = -0.35V$ $V_S^- = -0.3V$, $I_O = \pm 2mA$, $+0.05V \leq V_O \leq 0.65V$,		0.5		K	5, 6		
A_{VSH}	Shunt Gain	$1.1V \leq V_{OUT} \leq 6.1V$, $-5mA \leq I_{OUT} \leq -0.1mA$	See (1)	14		K	4
		$1.2V \leq V_{OUT} \leq 6.2V$, $-5mA \leq I_{OUT} \leq -0.1mA$	See (1)	6.0		K	5, 6
		$1.4V \leq V_{OUT} \leq 6.4V$, $-5mA \leq I_{OUT} \leq -0.1mA$	See (1)	8.0		K	4
		$1.4V \leq V_{OUT} \leq 6.4V$, $-20mA \leq I_{OUT} \leq -0.1mA$	See (1)	4.0		K	5, 6

(1) This defines operation in floating applications such as the bootstrapped regulator or two-wire transmitter. Output is connected to the V_S^+ terminal of the IC and input common mode is referred to V_S^- (see [Typical Applications](#) -). Effect of larger output-voltage swings with higher load resistance can be accounted for by adding the positive-supply rejection error.

LM10H Electrical Characteristics DC Parameters (continued)

The following conditions apply to all the following parameters, unless otherwise specified.

DC: At room temperature $1.2V \leq V_S \leq 45V$, $V_S \leq V_{CM} \leq V \pm 0.85V$.

DC: At temperature extremes $1.3V \leq V_S \leq 45V$, $V_S \leq V_{CM} \leq V \pm 1.0V$.

Symbol	Parameter	Conditions	Notes	Min	Max	Unit	Sub-groups
A_V	Amplifier Gain	$0.2V \leq V_{Ref} \leq 35V$, $I_{Ref} = 1mA$		50		K	
				23		K	
V_{Sense}	Feedback Sense Voltage	$0.2V \leq V_{Ref} \leq 35V$, $0 \leq I_{Ref} \leq 1 mA$		195	205	mV	
				194	206	mV	
I_{Sense}	Feedback Current				50	nA	
					65	nA	
ΔI_S	Supply Current Change	$0.5V \leq V_O \leq 25V$		-75	75	μA	
		$V_S = 5V$, $4.5V \leq V_O \leq 5V$		-60	60	μA	
R_I	Input Resistance		See ⁽²⁾		250	K Ω	
			See ⁽²⁾		150	K Ω	

(2) Specified parameter, not tested,

Definition of Terms

Input offset voltage: That voltage which must be applied between the input terminals to bias the unloaded output in the linear region.

Input offset current: The difference in the currents at the input terminals when the unloaded output is in the linear region.

Input bias current: The absolute value of the average of the two input currents.

Input resistance: The ratio of the change in input voltage to the change in input current on either input with the other grounded.

Large signal voltage gain: The ratio of the specified output voltage swing to the change in differential input voltage required to produce it.

Shunt gain: The ratio of the specified output voltage swing to the change in differential input voltage required to produce it with the output tied to the V_S^+ terminal of the IC. The load and power source are connected between the V_S^+ and V_S^- terminals, and input common-mode is referred to the V_S^- terminal.

Common-mode rejection: The ratio of the input voltage range to the change in offset voltage between the extremes.

Supply-voltage rejection: The ratio of the specified supply-voltage change to the change in offset voltage between the extremes.

Line regulation: The average change in reference output voltage over the specified supply voltage range.

Load regulation: The change in reference output voltage from no load to that load specified.

Feedback sense voltage: The voltage, referred to V_S^- , on the reference feedback terminal while operating in regulation.

Reference amplifier gain: The ratio of the specified reference output change to the change in feedback sense voltage required to produce it.

Feedback current: The absolute value of the current at the feedback terminal when operating in regulation.

Supply current: The current required from the power source to operate the amplifier and reference with their outputs unloaded and operating in the linear range.

Circuit descriptions available in application note AN-211 ([SNOA638](#)).

APPLICATION HINTS

With heavy amplifier loading to V_S^- , resistance drops in the V_S^- lead can adversely affect reference regulation. Lead resistance can approach 1Ω . Therefore, the common to the reference circuitry should be connected as close as possible to the package.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
